

A **successful revenue cycle begins with an accurate registration!** And, an accurate registration begins with a **valid patient identification.** AHI's **Patient ID** gives you the capability to quickly and accurately validate a patient's identification data at the time of registration. An early, accurate patient ID results in improved contact information, if and when it's needed for collection activities. It also helps reduce denials, rejected claims, returned statements, and other delays that impede the collections process and slow your revenue cycle.

HERE'S HOW IT WORKS

Using a database of the most current and comprehensive public records and locator information, the **Patient ID** automatically verifies your patient's last known address and phone number.

An enhanced version of this tool also includes a **fraud alert check** which validates and verifies the identity data of your patients using the US Treasury Departments OFAC information which provides compliance with the US Patriot Act.

CONTACT AHI SOFTWARE

When you implement AHI's **Patient ID**, you'll have everything you need to quickly and accurately verify your patients' identification. Call or email us today to get started improving your revenue cycle where it begins – at registration!
